

Assignment: Week_4_Day_1

Enhance the existing application by implementing a feature that automatically categorizes the generated test cases into standard testing types such as Smoke, Sanity, Regression, Functional.

Once the test cases are generated, the application should classify each test case into the most appropriate category and display the categorized results in a structured and user-friendly format

The new functionality should seamlessly integrate with the existing test case generation workflow without impacting current features

The screenshot displays the Testleaf API Testcase Generator interface. At the top, it says "Generate reliable API testcases from Swagger". Below this, a progress bar shows steps: 01 Upload, 02 Validate, 03 Generate, and 04 Export. A green banner indicates "3 API testcases generated".

STEP 3: Generated API testcases

Grounded in the validated OpenAPI operations and schemas.

Total Testcases: 3

- Positive: 1
- Negative: 1
- Boundary: 1

AUTOMATIC CLASSIFICATION

Testing type distribution

Testing Type	Count
Smoke	1
Sanity	0
Regression	1
Functional	1

Based on scenario intent and priority

Search ID, endpoint, method, or title

All testing types **All categories**

ID	METHOD	ENDPOINT	TESTING TYPE	CATEGORY	TITLE	PRIORITY	STATUS
TC-API-001	GET	/booking/{id}	Smoke	positive	Retrieve existing booking with valid ID	High	View
TC-API-002	GET	/booking/{id}	Regression	negative	Attempt to retrieve non-existent booking	High	View
TC-API-003	GET	/booking/{id}	Functional	boundary	Retrieve booking using boundary ID value 0	Medium	View

Download results

Export the generated testcases and validated specification.
