

Home Assignment:

GitHub Code Reviewer Agent with Custom UI

Using the User Story Reviewer workflow and UI files as a reference, build a custom UI for the existing GitHub Code Reviewer Agent.

Update the n8n workflow by adding a Webhook node as the first node and a Respond to Webhook node as the final node. Create your own phase-wise UI development prompt, build the UI, and connect it to the n8n workflow.

Customize the UI based on your organization's branding, including:

- Organization name and logo
- Brand theme and colours
- Professional header and footer
- Suitable fonts, buttons, icons, and layout
- Responsive design for desktop, tablet, and mobile
- Loading, success, validation, and error messages
- Any other relevant organization-specific enhancements

Submission Requirements

Submit the following items in both the WhatsApp group and your GitHub repository:

- Phase-wise implementation file
- Complete UI development prompt file
- n8n GitHub Code Reviewer workflow file
- Complete UI source-code files
- Screenshot of the complete n8n workflow
- Screenshots of the final UI and code-review results
- GitHub repository link

- Short demo video, if required

Ensure that the complete application is tested and working correctly before submission.

Phase 1

Phase 2: Building the Professional Header, Navigation & Review Controls

Add a professional navigation system and the main GitHub Code Review input controls.

Phase 3: Building the Dashboard Workspace & Review States

Create a clear AI review workspace with default waiting, loading, success, and error states.

Phase 4: Interactive Validation & User Feedback

🎯 Phase Goal

Add client-side validation and professional feedback before sending data

to the n8n workflow.

Phase 5: n8n Webhook Connection, Loading & Error Handling

🎯 Phase Goal

Connect the CodeSentinel AI frontend to the existing n8n GitHub Code Reviewer workflow using a POST request and handle the complete request lifecycle professionally.

Phase 6: Automatic Formatting of AI Code Review Results

🎯 Phase Goal

Display the AI-generated code review in a polished, readable, and professional results dashboard.

CODE REVIEW COMPLETE

COMPLETED ON 11/06/2023 11:00 AM

Single then required for most elements

Maintainability & Best Practices	Analysis: DRY (single-use method), lacks a constant for timeout, no logging or error handling, searchbase from deprecated repository with get new using old from	12
Testability & Reliability	Refactor create page objects, which is good for flaking but there is no verification that navigation occurred, no testing of <code>waitForElementToBeDisplayedFor</code> which assumes that it will wait until ready	18
Overall Score		72/100
